Region8 GIS Deliverable Guidance.pdf

Chris – Here is what it will take to give CB&I access to our GIS for the Upper Animas Mining District. I would like to suggest 1 name/email address from USACE and no more than 2 from CB&I. We can discuss tomorrow if you have questions.

Paula,

1. They can be provided with access to the site viewer. I will need names and email addresses.
2. Data can be provided to them from our GIS, but given the somewhat dynamic nature of some data, there will need to be a process established so that data gets synchronized regularly. I will need to know what specific data layers they would like so that we don't dump a bunch of confusing legacy data on them. Any base data that is readily available from other agencies or sources will need to be acquired by them from the sources directly.
3. Any GIS-related work that your contractor performs needs to conform to the standards and guidelines established in Region 8. The attached document will provide them with a clear target when it comes to spatial data deliverables. I am also available to answer any questions they may have regarding this.

John – I have a contractor thru USACE working on the Upper Animas site. How can they get access to the GIS system that will assist them with understanding the locations of sampling sites as well as any place names, cultural or physical features. Thanks.
